

VA.gov Facility Locator Map for Mobile

Problem: Mobile Facility Locator Map is not interactive and missing key information

Current State

- Map view is separate from List view
- Map pins do not reveal any information about locations
- Using the Map in conjunction with List view requires cognitive load
- Map is not currently accessible with screen readers

What if...

- We could display useful information for each location?
- We could display this information independently from the List view?
- If we could design the cards to be accessible with screen readers?

Exploration: Map & Cards Combo

Based on mobile approach by zocdoc.com, google maps mobile + app
